

Use session handling to create the following forms below. Generate a report form to display the information entered on the form.

The image displays three overlapping screenshots of a web form titled "PHP Multi Page Form".

**Page 1 (Top Left):** Contains fields for "Full Name :\*", "Email :\*", "Contact :\*", "Password :\*", and "Re-enter Password :\*". The "Full Name" field contains "Ex-James Anderson" and the "Email" field contains "Ex-anderson@gmail.com". The "Contact" field has a placeholder "10-digit number". The "Password" and "Re-enter Password" fields have placeholder "\*\*\*\*\*". There is a "Reset" button and a partially visible "Next" button.

**Page 2 (Top Right):** Contains fields for "Religion :\*", "Nationality :\*", "Gender :\*", "Educational Qualification :\*", and "Job Experience :\*". The "Religion" and "Nationality" fields are empty. The "Gender" field has radio buttons for "Male" and "Female". The "Educational Qualification" and "Job Experience" fields are dropdown menus with "----Select----" as the selected option. There are "Reset" and "Next" buttons.

**Page 3 (Bottom):** Contains fields for "Address Line1", "Address Line2", "City :\*", "Pin Code :\*", and "State :\*". The "Address Line1" and "Address Line2" fields are empty. The "City", "Pin Code", and "State" fields are empty. There are "Reset" and "Submit" buttons.
